

SudSafe Kit – City of Normandy Park

Made by: Bowhead Manufacturing Company LLC, Seattle, WA Phone: 800-909-3677

Purpose: Storm drains convey water through the public stormwater system to the nearest stream or lake without treatment. It is important to keep vehicle washwater from entering storm drains because detergents, oils, and heavy metals can be toxic to aquatic life. The SudSafe car wash kit captures washwater before it enters the storm drain and pumps it to either a grassy area or sanitary sewer. Using this kit helps to protect the water quality of our lakes and streams.

Note: It is a violation of most municipal codes to allow polluted vehicle washwater to enter a public stormwater system.

Safety Precautions:

1. Always use the GFCI shock protection cord. Electricity and water can cause severe shocks. Keep the electrical cord way from puddles and hoses.
2. Be very careful removing and replacing the catch basin grate. These grates are very heavy and some catch basins may be very deep.
3. Be careful to not fall into or drop items into the catch basin.
4. Parental supervision is always recommended.
5. Set up your car wash where you have ample space between cars and the kit.

Detailed Instructions:

1. Remove storm drain grate: hook between the grates, lift and slide away from the drain.
2. Set SudSafe tub into the catch basin.
3. Set up traffic cones around the catch basin.
4. Attach hose and electrical cord to pump and place pump in the SudSafe tub.
5. Place other end of hose inside a sink, on dirt, grassy or woody areas.
6. Plug electrical cord into ground fault interrupter (GFCI) and plug into power outlet, routing cord away from wet areas.
7. During the car wash, periodically check that no vehicles are parked on the drain hose and that the system is pumping.
8. Use hoses with spray nozzles to conserve water.
9. When done, drain out the hose, neatly place all items back into the tub and carrying bag, replace catch basin and clean site.
10. Return kit to City Hall, 801 SW 174th St., Normandy Park, WA 98166. Contact Phone: 206-248-8248.

Kit Contents: Tub, Pump, Hose, Extension Cord, Cones and Hook.

I have read, understand and agree to follow the above listed Safety Precautions and Detailed Instructions. I will return the kit upon completion of our event date _____. A copy of this form is included with the kit.
